

Amazon RDS & Amazon Aurora

Fully Managed Relational Database Service

Official Service Proposal & Capability Overview | Generated August 2026

SLA Up to 99.99% for Aurora Multi-AZ; 99.95%...	Engines 6 supported	Regions Global coverage
---	-------------------------------	-----------------------------------

1. Supported Database Engines

MySQL, PostgreSQL, MariaDB, Oracle, SQL Server, Amazon Aurora (MySQL/PostgreSQL compatible)

2. Service Level Agreement & High Availability

SLA Commitment: Up to 99.99% for Aurora Multi-AZ; 99.95% for RDS Multi-AZ

HA Architecture: Multi-AZ synchronous replication with automatic failover (<30s for RDS, <30s Aurora). Aurora Global Database for multi-region <1s lag.

RPO / RTO: RPO ~0 for Multi-AZ; RTO <30s. Aurora Global RPO <1s, RTO <1min.

Replication & Failover: Multi-AZ synchronous, Global Database options. Automatic failover.

Read Replicas: Up to 15 Aurora replicas; cross-region supported.

3. Security, Encryption & Compliance

Encryption: AES-256 at rest via AWS KMS (customer-managed or AWS-managed keys). TLS 1.2+ in transit. TDE for Oracle/SQL Server.

Certifications: SOC 1/2/3, ISO 27001, PCI DSS, HIPAA eligible, FedRAMP, GDPR, IRAP

IAM Integration: IAM database authentication, AWS IAM integration, Secrets Manager, VPC security groups, PrivateLink.

Audit Logging: Database Activity Streams, CloudTrail integration, fine-grained auditing.

Data Residency: Customer chooses region; data does not leave selected region unless configured.

4. Performance & Scaling

Performance: Aurora: up to 5x MySQL / 3x PostgreSQL throughput. Sub-10ms latency typical. Up to 128 vCPU, 1TB+ RAM. IOPS up to 256k on io2.

Scaling: Vertical: instance class change. Horizontal: Aurora read replicas (up to 15), Aurora Serverless v2 auto-scales ACUs. Storage auto-scales to 128 TiB.

Connection Pooling: Amazon RDS Proxy recommended for connection management and failover.

5. Backup, Recovery & Disaster Recovery

Backup: Automated continuous backups with point-in-time recovery (up to 35 days). Manual snapshots retained indefinitely. Cross-region snapshot copy.

DR: Cross-region replicas, Aurora Global Database, Pilot Light / Warm Standby patterns supported.

6. Pricing, Discounts & Fees

Model: On-demand, Reserved Instances (1/3 yr up to 72% savings), Savings Plans. Aurora Serverless pay-per-ACU. Storage \$0.10/GB-mo (Aurora).

Additional Fees: Data transfer (egress), snapshot storage, I/O (for some configs), backup storage beyond free tier, KMS API charges if customer-managed.

Reserved / Savings: Reserved Instances and Savings Plans available. Volume discounts via Enterprise Discount Program (EDP). Reserved capacity savings up to 72%. Contact AWS account team for custom proposals.

Service Credits: Credits issued per SLA terms for unmet uptime (typically 10-100% of monthly fee based on severity).

7. Operations, Observability & Support

Observability: Amazon CloudWatch metrics/logs, Performance Insights, Enhanced Monitoring, Database Activity Streams, RDS Proxy for connection pooling.

Slow Query Analysis: Performance Insights + Enhanced Monitoring provide recommendations and wait analysis.

Support Tiers: Basic (free), Developer, Business (24/7), Enterprise. Response times from 24h to 15min critical.

Maintenance Windows: Customer-configurable weekly windows; Aurora has near-zero downtime patching options.

8. Network, Migration & Portability

Private Networking: VPC isolation, PrivateLink, VPC peering, Transit Gateway. Egress charged at standard AWS rates.

Migration: AWS DMS (Database Migration Service), SCT (Schema Conversion Tool), native dump/restore, zero-downtime tools.

Vendor Lock-in / Portability: Standard engines (MySQL/Postgres/etc.) allow relatively straightforward migration out via dump or DMS reverse. Aurora has some proprietary optimizations but remains wire-compatible.

Data Centers / Regions: All major AWS regions including Mumbai (ap-south-1), Hyderabad (ap-south-2), Ohio (us-east-2), N. Virginia (us-east-1), Seoul (ap-northeast-2), Frankfurt, Singapore, Sydney, Tokyo, Sao Paulo.

Limitations: Some engine features restricted; max connections depend on instance class; maintenance windows required for major upgrades.

This document constitutes a capability overview and commercial proposal framework. Final pricing and SLAs are subject to executed order forms and AWS Customer Agreement.
