

# CockroachDB Cloud

## Distributed SQL Database Built for Scale and Resilience

Cockroach Labs Service Proposal

---

### 1. Performance Characteristics

Serializable isolation by default. Horizontal scale to 100s of nodes. Low-latency geo-partitioning.

### 2. Scaling (Vertical / Horizontal / Auto)

True horizontal scaling by adding nodes. Auto-rebalancing. Serverless and dedicated tiers.

### 3. Backup, Recovery & Disaster Recovery

Managed backups with PITR. Incremental backups. Cross-region restore.

Replication and failover capabilities as described in HA section. Service credits available for SLA breaches per policy.

### 4. Pricing Model & Additional Fees

Serverless: RU-based. Dedicated: per vCPU/storage. Committed use discounts available.

**Additional / Hidden Fees:** Network egress, backup storage beyond included, snapshot storage, premium support, data transfer between regions/clouds, CMEK/KMS usage.

**Reserved / Committed Discounts:** Annual commits and volume discounts. Contact Cockroach Labs sales.

### 5. Observability, Monitoring & Slow Query Analysis

DB Console metrics, statements, transactions, changefeeds, Prometheus export, Datadog integration.

Most platforms provide slow-query logs, explain plans, and recommendation engines.

### 6. Support Tiers & Response Times

Standard, Essential, Advanced. 24/7 for higher tiers.

### 7. Data Migration & Tooling

MOLT (Migrate Off Legacy Technology) toolkit, pg\_dump compatible, AWS DMS compatible.

### 8. Network, VPC/Private Access & Peering

Private connectivity options. Public + private endpoints. Egress fees by cloud provider.

### 9. Data Center / Region Locations

AWS, GCP, Azure regions: multi-region configs spanning US, EU, Asia-Pacific (Tokyo, Singapore, Sydney).

### 10. Vendor Lock-in & Portability

Where standard engines (Postgres, MySQL, Redis protocols) are used, portability is high via dump/restore or logical replication. Proprietary extensions or distributed SQL semantics may require more effort. Open standards and export tools mitigate lock-in.

### 11. Managed Service Limitations

PostgreSQL compatibility is high but not 100%; distributed transactions have higher latency than single-node; learning curve for geo-partitioning.

### 12. Maintenance & Backup Windows

Customer-configurable or provider-managed low-impact maintenance. Backup windows typically continuous or daily with minimal performance impact.

### 13. Supported Engines & Technology Stack

CockroachDB (PostgreSQL-compatible distributed SQL)

Compatible with standard drivers, ORMs, and tooling for the listed engines.

### 14. SLA, Uptime & High Availability

**SLA:** 99.99% availability SLA for multi-region deployments.

**Architecture:** Survives AZ and region failures with Raft consensus. Automatic rebalancing and repair.

**RPO/RTO:** RPO 0 for committed writes (Raft); RTO seconds to minutes depending on failure domain.

Multi-region and clustering options available where noted.

### 15. Encryption, Security & Compliance

**Encryption:** Encryption at rest (AES-256). TLS 1.2+ in transit. Customer-managed encryption keys available on dedicated.

**Certifications:** SOC 2 Type II, ISO 27001, PCI DSS, HIPAA eligible, GDPR

**IAM:** Cloud console IAM, SQL users/roles, PrivateLink / PSC, IP allowlists, SSO.

Audit logging and customer-managed keys supported on applicable tiers.
