

PlanetScale

The MySQL-compatible Serverless Database Platform

PlanetScale Inc. Service Proposal

1. Scaling (Vertical / Horizontal / Auto)

Horizontal via Vitess. Serverless storage & compute. Autoscaling. Read-only regions.

2. Backup, Recovery & Disaster Recovery

Continuous backups + branching model. Instant restore from any point. Branch-based workflows.

Replication and failover capabilities as described in HA section. Service credits available for SLA breaches per policy.

3. Pricing Model & Additional Fees

Usage-based (storage + row reads/writes). Scaler Pro and Enterprise plans with committed discounts.

Additional / Hidden Fees: Network egress, backup storage beyond included, snapshot storage, premium support, data transfer between regions/clouds, CMEK/KMS usage.

Reserved / Committed Discounts: Annual plans and Enterprise volume pricing. Contact sales.

4. Observability, Monitoring & Slow Query Analysis

Insights dashboard, query metrics, slow query log, schema insights, Insights API.

Most platforms provide slow-query logs, explain plans, and recommendation engines.

5. Support Tiers & Response Times

Community, Standard, Enterprise. Priority support on paid.

6. Data Migration & Tooling

PlanetScale Import, AWS DMS compatible, native MySQL dump/restore, gh-ost style online schema.

7. Network, VPC/Private Access & Peering

Public + PrivateLink. Connection pooling built-in. Egress charges.

8. Data Center / Region Locations

AWS regions primarily: US East/West, EU (Frankfurt/Ireland), Asia (Singapore, Tokyo), Australia.

9. Vendor Lock-in & Portability

Where standard engines (Postgres, MySQL, Redis protocols) are used, portability is high via dump/restore or logical replication.

Proprietary extensions or distributed SQL semantics may require more effort. Open standards and export tools mitigate lock-in.

10. Managed Service Limitations

Some MySQL features unsupported (e.g. certain foreign keys in older modes); branching model different from traditional; Vitess learning curve.

11. Maintenance & Backup Windows

Customer-configurable or provider-managed low-impact maintenance. Backup windows typically continuous or daily with minimal performance impact.

12. Supported Engines & Technology Stack

MySQL (Vitess-powered), PostgreSQL (emerging)
Compatible with standard drivers, ORMs, and tooling for the listed engines.

13. SLA, Uptime & High Availability

SLA: 99.99% uptime for production branches.

Architecture: Multi-AZ by default. Automatic failover. Global deployment with low-latency reads.

RPO/RTO: RPO near-zero; RTO seconds via Vitess topology.

Multi-region and clustering options available where noted.

14. Encryption, Security & Compliance

Encryption: Encryption at rest and in transit (TLS). Customer-managed keys on higher plans.

Certifications: SOC 2 Type II, ISO 27001, PCI DSS, GDPR, HIPAA (Enterprise)

IAM: Organization roles, database users, SSO/SAML, IP restrictions, PrivateLink (Enterprise).

Audit logging and customer-managed keys supported on applicable tiers.

15. Performance Characteristics

Vitess horizontal sharding. Unlimited connections via connection pooling. Sub-ms query latency typical on hot paths.
