

MariaDB SkySQL

Cloud Database Service Powered by MariaDB

MariaDB plc Service Proposal

1. SLA, Uptime & High Availability

SLA: 99.99% for multi-AZ configurations.

Architecture: MaxScale + multi-AZ. Automatic failover. Distributed Xpand for multi-node HA.

RPO/RTO: RPO near-zero; RTO seconds to minutes.

Multi-region and clustering options available where noted.

2. Encryption, Security & Compliance

Encryption: Encryption at rest (TDE). TLS in transit. Key management options.

Certifications: SOC 2, ISO 27001, PCI DSS, GDPR, HIPAA eligible

IAM: SkySQL console, database users, SSO, private networking, IP controls.

Audit logging and customer-managed keys supported on applicable tiers.

3. Performance Characteristics

Xpand for distributed scale-out. ColumnStore for analytics. MaxScale for proxy/HA/load balance.

4. Scaling (Vertical / Horizontal / Auto)

Vertical + horizontal (Xpand). Read replicas. Storage scaling.

5. Backup, Recovery & Disaster Recovery

Automated backups + PITR. Snapshot-based. Cross-region options.

Replication and failover capabilities as described in HA section. Service credits available for SLA breaches per policy.

6. Pricing Model & Additional Fees

Instance-based + storage. Reserved and committed discounts. Free trial available.

Additional / Hidden Fees: Network egress, backup storage beyond included, snapshot storage, premium support, data transfer between regions/clouds, CMEK/KMS usage.

Reserved / Committed Discounts: Committed use and enterprise agreements. Contact MariaDB sales.

7. Observability, Monitoring & Slow Query Analysis

SkySQL monitoring, MaxScale stats, slow query log, integration with Prometheus/Grafana.

Most platforms provide slow-query logs, explain plans, and recommendation engines.

8. Support Tiers & Response Times

Standard, Enterprise. 24/7 for Enterprise. MariaDB expertise.

9. Data Migration & Tooling

MariaDB tools, AWS DMS compatible, dump/restore, replication from MySQL/MariaDB.

10. Network, VPC/Private Access & Peering

PrivateLink / private endpoints. VPC isolation. Egress charges.

11. Data Center / Region Locations

AWS, GCP, Azure: US, EU, Asia-Pacific regions including Mumbai coverage via partners/clouds.

12. Vendor Lock-in & Portability

Where standard engines (Postgres, MySQL, Redis protocols) are used, portability is high via dump/restore or logical replication. Proprietary extensions or distributed SQL semantics may require more effort. Open standards and export tools mitigate lock-in.

13. Managed Service Limitations

Smaller ecosystem than AWS/GCP native; Xpand has specific operational model; feature lag vs pure MySQL in some areas.

14. Maintenance & Backup Windows

Customer-configurable or provider-managed low-impact maintenance. Backup windows typically continuous or daily with minimal performance impact.

15. Supported Engines & Technology Stack

MariaDB Enterprise Server, Xpand (distributed SQL), ColumnStore (analytics)
Compatible with standard drivers, ORMs, and tooling for the listed engines.
