

YugabyteDB Aeon

Distributed PostgreSQL for Cloud-Native Applications

Yugabyte Service Proposal

1. SLA, Uptime & High Availability

SLA: 99.99% for multi-region clusters.

Architecture: Survives AZ/region failure. Automatic leader election & rebalancing. Synchronous/async replication options.

RPO/RTO: RPO 0 for sync replication; RTO seconds.

Multi-region and clustering options available where noted.

2. Encryption, Security & Compliance

Encryption: Encryption at rest (AES-256). TLS in transit. CMEK support.

Certifications: SOC 2 Type II, ISO 27001, PCI DSS, GDPR, HIPAA eligible

IAM: Cloud console RBAC, SQL roles, SSO, PrivateLink/PSC, network allowlists.

Audit logging and customer-managed keys supported on applicable tiers.

3. Performance Characteristics

Horizontal write scaling. Geo-distribution with low latency. Raft-based consensus. High throughput.

4. Scaling (Vertical / Horizontal / Auto)

Add nodes for linear scale. Auto-sharding. Read replicas. Multi-region tablespaces.

5. Backup, Recovery & Disaster Recovery

Managed continuous backups. PITR. Cross-region backup.

Replication and failover capabilities as described in HA section. Service credits available for SLA breaches per policy.

6. Pricing Model & Additional Fees

vCPU + storage based. Serverless and dedicated. Committed discounts.

Additional / Hidden Fees: Network egress, backup storage beyond included, snapshot storage, premium support, data transfer between regions/clouds, CMEK/KMS usage.

Reserved / Committed Discounts: Annual commits and enterprise agreements. Contact Yugabyte sales.

7. Observability, Monitoring & Slow Query Analysis

YugabyteDB Anywhere / Aeon console, metrics, slow queries, Prometheus, Datadog.

Most platforms provide slow-query logs, explain plans, and recommendation engines.

8. Support Tiers & Response Times

Standard, Enterprise. 24/7 for Enterprise. Response SLAs.

9. Data Migration & Tooling

Yugabyte Voyager, pg_dump compatible, AWS DMS, logical replication.

10. Network, VPC/Private Access & Peering

Private endpoints. Multi-cloud networking. Egress charges by underlying cloud.

11. Data Center / Region Locations

AWS, GCP, Azure multi-region: US, EU, Asia-Pacific (Tokyo, Singapore, Mumbai options).

12. Vendor Lock-in & Portability

Where standard engines (Postgres, MySQL, Redis protocols) are used, portability is high via dump/restore or logical replication. Proprietary extensions or distributed SQL semantics may require more effort. Open standards and export tools mitigate lock-in.

13. Managed Service Limitations

PostgreSQL compatibility high but distributed semantics differ (e.g. some isolation nuances); operational model for geo-partitioning.

14. Maintenance & Backup Windows

Customer-configurable or provider-managed low-impact maintenance. Backup windows typically continuous or daily with minimal performance impact.

15. Supported Engines & Technology Stack

YugabyteDB (PostgreSQL-compatible distributed SQL), YSQL, YCQL
Compatible with standard drivers, ORMs, and tooling for the listed engines.

This proposal from Yugabyte is provided for evaluation purposes. Binding terms appear in the definitive agreement and order form. Contact your account representative for customized quotations and proof-of-concept support.
