

Aiven

Open Source Data Platform - Managed Kafka, Postgres, MySQL, Redis & More

Aiven Oy Service Proposal

1. SLA, Uptime & High Availability

SLA: 99.99% for multi-AZ plans.

Architecture: Multi-AZ by default on Business+. Automatic failover. Cross-cloud DR options.

RPO/RTO: RPO near-zero; RTO minutes.

Multi-region and clustering options available where noted.

2. Encryption, Security & Compliance

Encryption: Encryption at rest and in transit. BYOK on higher plans. TLS everywhere.

Certifications: SOC 2 Type II, ISO 27001, PCI DSS, GDPR, HIPAA (select services)

IAM: Aiven console RBAC, SSO/SAML, VPC peering / PrivateLink, IP filters, service integrations.

Audit logging and customer-managed keys supported on applicable tiers.

3. Performance Characteristics

Dedicated VMs. Autoscaling options. High-performance plans. Cross-cloud networking.

4. Scaling (Vertical / Horizontal / Auto)

Vertical plan upgrades. Horizontal for Kafka etc. Storage autoscaling. Read replicas.

5. Backup, Recovery & Disaster Recovery

Automated backups + PITR for databases. Retention policies. Cross-region.

Replication and failover capabilities as described in HA section. Service credits available for SLA breaches per policy.

6. Pricing Model & Additional Fees

Hourly by plan. Startup / Business / Premium tiers. Annual prepay discounts up to 30%+.

Additional / Hidden Fees: Network egress, backup storage beyond included, snapshot storage, premium support, data transfer between regions/clouds, CMEK/KMS usage.

Reserved / Committed Discounts: Annual prepayment significant discounts. Startup credits. Enterprise custom deals.

7. Observability, Monitoring & Slow Query Analysis

Built-in metrics, integrations with Datadog/Prometheus/New Relic, log integration, slow query for DBs.

Most platforms provide slow-query logs, explain plans, and recommendation engines.

8. Support Tiers & Response Times

Email, chat, 24/7 phone on higher tiers. Severity response times.

9. Data Migration & Tooling

Aiven migration tools, native dump/restore, Kafka MirrorMaker, partner services.

10. Network, VPC/Private Access & Peering

VPC peering, PrivateLink, Public + private access. Egress by cloud.

11. Data Center / Region Locations

AWS, GCP, Azure, DigitalOcean, UpCloud: 100+ regions including Mumbai, Singapore, Tokyo, Frankfurt, Virginia, London, Sydney.

12. Vendor Lock-in & Portability

Where standard engines (Postgres, MySQL, Redis protocols) are used, portability is high via dump/restore or logical replication. Proprietary extensions or distributed SQL semantics may require more effort. Open standards and export tools mitigate lock-in.

13. Managed Service Limitations

Multi-service platform means depth varies; some advanced features require Premium; pricing can add up across services.

14. Maintenance & Backup Windows

Customer-configurable or provider-managed low-impact maintenance. Backup windows typically continuous or daily with minimal performance impact.

15. Supported Engines & Technology Stack

PostgreSQL, MySQL, Redis, Kafka, OpenSearch, Cassandra, ClickHouse, Flink, Grafana
Compatible with standard drivers, ORMs, and tooling for the listed engines.
