

MongoDB Atlas

The Multi-Cloud Developer Data Platform

MongoDB, Inc. Service Proposal

1. Supported Engines & Technology Stack

MongoDB (document model), Atlas Search, Atlas Vector Search, Time Series, Atlas Data Lake
Compatible with standard drivers, ORMs, and tooling for the listed engines.

2. SLA, Uptime & High Availability

SLA: 99.995% uptime SLA across AWS, Azure, GCP for dedicated clusters.

Architecture: Replica sets (3+ nodes) across AZs by default. Multi-region clusters. Automatic failover.

RPO/RTO: RPO seconds with continuous backup; RTO minutes for failover. Multi-region near-zero RPO.

Multi-region and clustering options available where noted.

3. Encryption, Security & Compliance

Encryption: AES-256 at rest (cloud provider + optional customer KMS: AWS KMS/Azure KV/GCP KMS). TLS required. Queryable Encryption.

Certifications: SOC 2 Type II, ISO 27001, PCI DSS, HIPAA, FedRAMP Moderate (Atlas for Government), GDPR

IAM: Atlas users + LDAP/SAML/OIDC federation. Database users with SCRAM. Network peering / Private Endpoints.

Audit logging and customer-managed keys supported on applicable tiers.

4. Performance Characteristics

Auto-scaling clusters. Global clusters with zone sharding. Up to 1000+ IOPS configurable. Serverless instances available.

5. Scaling (Vertical / Horizontal / Auto)

Vertical (cluster tier) + horizontal (sharding). Auto-scaling for compute/storage. Serverless auto.

6. Backup, Recovery & Disaster Recovery

Continuous cloud backups with PITR. Snapshot retention configurable. Cross-cloud snapshot restore.

Replication and failover capabilities as described in HA section. Service credits available for SLA breaches per policy.

7. Pricing Model & Additional Fees

Pay-as-you-go by cluster tier + storage + data transfer. Reserved capacity / committed spend discounts. Serverless by usage.

Additional / Hidden Fees: Network egress, backup storage beyond included, snapshot storage, premium support, data transfer between regions/clouds, CMEK/KMS usage.

Reserved / Committed Discounts: Committed spend discounts available. Enterprise agreements. Contact MongoDB sales for volume pricing.

8. Observability, Monitoring & Slow Query Analysis

Atlas Metrics, Real-Time Performance Panel, Query Profiler, Performance Advisor, Charts, Alerts.

Most platforms provide slow-query logs, explain plans, and recommendation engines.

9. Support Tiers & Response Times

Developer, Pro, Enterprise. 24/7 for Pro+. Response times tiered by severity.

10. Data Migration & Tooling

Live Migrate, mongomirror, Compass, Relational Migrator, official connectors.

11. Network, VPC/Private Access & Peering

VPC Peering (AWS/Azure/GCP), Private Endpoints (PrivateLink etc.), IP Access Lists. Data transfer fees apply.

12. Data Center / Region Locations

Multi-cloud: all major AWS/Azure/GCP regions incl. Mumbai, Singapore, Tokyo, Seoul, Frankfurt, Virginia, Oregon, London, Sydney.

13. Vendor Lock-in & Portability

Where standard engines (Postgres, MySQL, Redis protocols) are used, portability is high via dump/restore or logical replication. Proprietary extensions or distributed SQL semantics may require more effort. Open standards and export tools mitigate lock-in.

14. Managed Service Limitations

Shared tiers have noisy neighbor; some features require M10+; multi-cloud has latency considerations.

15. Maintenance & Backup Windows

Customer-configurable or provider-managed low-impact maintenance. Backup windows typically continuous or daily with minimal performance impact.
