

# Snowflake

## The Data Cloud - AI Data Cloud Platform

Snowflake Inc. Service Proposal

---

### 1. Performance Characteristics

Near-unlimited scale via multi-cluster warehouses. Automatic micro-partitioning & pruning. Result caching.

### 2. Scaling (Vertical / Horizontal / Auto)

Independent compute (warehouses) and storage scaling. Multi-cluster auto-scale. Instant resize.

### 3. Backup, Recovery & Disaster Recovery

Time Travel (1-90 days by edition). Fail-safe (7 days). Zero-copy cloning. Cross-region replication.

Replication and failover capabilities as described in HA section. Service credits available for SLA breaches per policy.

### 4. Pricing Model & Additional Fees

Compute credits per second (min 60s) + storage per TB. Capacity purchases for discounts. Editions: Standard/Enterprise/Business Critical.

**Additional / Hidden Fees:** Network egress, backup storage beyond included, snapshot storage, premium support, data transfer between regions/clouds, CMEK/KMS usage.

**Reserved / Committed Discounts:** Capacity commitments yield significant discounts. Contact Snowflake sales for enterprise pricing.

### 5. Observability, Monitoring & Slow Query Analysis

Query History, Account Usage views, Resource Monitors, Snowsight dashboards, partner integrations.

Most platforms provide slow-query logs, explain plans, and recommendation engines.

### 6. Support Tiers & Response Times

Premier Support 24x365 included in most editions. Severity-based response.

### 7. Data Migration & Tooling

Snowpipe, bulk load, partner ETL (Fivetran, dbt), database replication tools.

### 8. Network, VPC/Private Access & Peering

Private connectivity (AWS PrivateLink, Azure Private Link, GCP PSC). Egress charged.

### 9. Data Center / Region Locations

AWS, Azure, GCP regions worldwide incl. Mumbai (limited), Singapore, Tokyo, Seoul, Sydney, Frankfurt, Virginia, Oregon, London.

### 10. Vendor Lock-in & Portability

Where standard engines (Postgres, MySQL, Redis protocols) are used, portability is high via dump/restore or logical replication. Proprietary extensions or distributed SQL semantics may require more effort. Open standards and export tools mitigate lock-in.

### 11. Managed Service Limitations

Proprietary engine (not open-source Postgres/MySQL); credit-based cost model can surprise; limited procedural SQL vs traditional RDBMS.

## 12. Maintenance & Backup Windows

Customer-configurable or provider-managed low-impact maintenance. Backup windows typically continuous or daily with minimal performance impact.

## 13. Supported Engines & Technology Stack

Snowflake proprietary (ANSI SQL), Iceberg Tables, Unistore, Snowpark  
Compatible with standard drivers, ORMs, and tooling for the listed engines.

## 14. SLA, Uptime & High Availability

**SLA:** 99.9% standard; higher with multi-cluster and Business Critical features.

**Architecture:** Built-in multi-AZ. Cross-region database replication & failover. Client redirect.

**RPO/RTO:** RPO configurable via replication; RTO minutes for failover.

Multi-region and clustering options available where noted.

## 15. Encryption, Security & Compliance

**Encryption:** Always-on AES-256 hierarchical keys. Tri-Secret Secure (customer-managed keys) on Business Critical. TLS everywhere.

**Certifications:** SOC 1/2 Type II, ISO 27001, PCI DSS, HIPAA, FedRAMP Moderate, HITRUST, GDPR

**IAM:** Snowflake RBAC, SCIM, SAML SSO, OAuth, network policies, Private Link / Private Service Connect.

Audit logging and customer-managed keys supported on applicable tiers.
