

Neon

Serverless Postgres - Branching Database for Developers

Neon Inc. Service Proposal

1. Scaling (Vertical / Horizontal / Auto)

Serverless autoscaling of compute. Storage separates and scales independently. Instant read replicas via branches.

2. Backup, Recovery & Disaster Recovery

Point-in-time recovery via history retention (up to 30+ days). Branch from any point in time.

Replication and failover capabilities as described in HA section. Service credits available for SLA breaches per policy.

3. Pricing Model & Additional Fees

Free tier generous. Launch/Scale/Business plans usage-based (compute hours + storage). Annual discounts.

Additional / Hidden Fees: Network egress, backup storage beyond included, snapshot storage, premium support, data transfer between regions/clouds, CMEK/KMS usage.

Reserved / Committed Discounts: Annual billing discounts. Enterprise custom pricing available.

4. Observability, Monitoring & Slow Query Analysis

Metrics, query history, monitoring integrations (Datadog, Grafana), connection details.

Most platforms provide slow-query logs, explain plans, and recommendation engines.

5. Support Tiers & Response Times

Community + paid support tiers. Priority for Business/Enterprise.

6. Data Migration & Tooling

pg_dump / restore, logical replication, AWS DMS compatible, partner tools.

7. Network, VPC/Private Access & Peering

Public + private networking options. Connection pooling (PgBouncer integrated).

8. Data Center / Region Locations

AWS regions: US East, US West, EU (Frankfurt), Asia Pacific (Singapore), and expanding.

9. Vendor Lock-in & Portability

Where standard engines (Postgres, MySQL, Redis protocols) are used, portability is high via dump/restore or logical replication.

Proprietary extensions or distributed SQL semantics may require more effort. Open standards and export tools mitigate lock-in.

10. Managed Service Limitations

Still maturing enterprise features vs legacy cloud DBs; scale-to-zero cold start; some Postgres extensions limited.

11. Maintenance & Backup Windows

Customer-configurable or provider-managed low-impact maintenance. Backup windows typically continuous or daily with minimal performance impact.

12. Supported Engines & Technology Stack

PostgreSQL (serverless, with branching)
Compatible with standard drivers, ORMs, and tooling for the listed engines.

13. SLA, Uptime & High Availability

SLA: 99.95%+ for production projects (scale with plan).
Architecture: Multi-AZ storage. Compute can be multi-AZ on higher plans. Fast recovery.
RPO/RTO: RPO seconds via continuous WAL; RTO fast due to serverless architecture.
Multi-region and clustering options available where noted.

14. Encryption, Security & Compliance

Encryption: Encryption at rest (AES-256). TLS in transit. CMEK on Enterprise.
Certifications: SOC 2 Type II, ISO 27001 (in progress / available), GDPR
IAM: Project roles, API keys, SSO on Business, IP allowlists, Private Networking (Enterprise).
Audit logging and customer-managed keys supported on applicable tiers.

15. Performance Characteristics

Scale-to-zero. Instant branching (copy-on-write). Autoscaling compute. Up to 10s of GB RAM on paid.
