

Supabase

Open Source Firebase Alternative - Postgres Backend Platform

Supabase Inc. Service Proposal

1. Supported Engines & Technology Stack

PostgreSQL, Realtime, Storage, Edge Functions, Vector (pgvector)
Compatible with standard drivers, ORMs, and tooling for the listed engines.

2. SLA, Uptime & High Availability

SLA: 99.9% on Pro; higher enterprise SLAs available.

Architecture: Multi-AZ on paid. Automatic failover. Read replicas for scale.

RPO/RTO: RPO minutes with backups; higher with PITR. RTO depends on plan.

Multi-region and clustering options available where noted.

3. Encryption, Security & Compliance

Encryption: Encryption at rest. TLS everywhere. Customer-managed keys on Enterprise.

Certifications: SOC 2 Type II, ISO 27001, HIPAA (Enterprise), GDPR

IAM: Supabase Auth (GoTrue), RLS (Row Level Security), API keys, SSO/SAML on Team+, network restrictions.

Audit logging and customer-managed keys supported on applicable tiers.

4. Performance Characteristics

Connection pooling (Supavisor). Read replicas. Edge network. pgvector for AI workloads.

5. Scaling (Vertical / Horizontal / Auto)

Vertical compute upgrades. Read replicas. Disk autoscaling. Edge Functions scale independently.

6. Backup, Recovery & Disaster Recovery

Daily backups + PITR on Pro+. Point-in-time recovery. Branching (preview).

Replication and failover capabilities as described in HA section. Service credits available for SLA breaches per policy.

7. Pricing Model & Additional Fees

Free tier. Pro (\$25+/mo) + compute add-ons. Team/Enterprise custom. Usage-based for some resources.

Additional / Hidden Fees: Network egress, backup storage beyond included, snapshot storage, premium support, data transfer between regions/clouds, CMEK/KMS usage.

Reserved / Committed Discounts: Annual plans discount. Enterprise custom contracts. Open-source self-host option reduces lock-in.

8. Observability, Monitoring & Slow Query Analysis

Dashboard metrics, Logflare, SQL editor insights, OpenTelemetry support, slow query views.

Most platforms provide slow-query logs, explain plans, and recommendation engines.

9. Support Tiers & Response Times

Community, email, priority on Pro+, dedicated on Enterprise.

10. Data Migration & Tooling

pg_dump, logical replication, official migration guides, partner tools.

11. Network, VPC/Private Access & Peering

Public API + database direct. Connection pooling. Custom domains. Private links on Enterprise.

12. Data Center / Region Locations

AWS-backed: US East, West Europe, Southeast Asia (Singapore), Northeast Asia (Tokyo), Sydney, Mumbai, Sao Paulo and more.

13. Vendor Lock-in & Portability

Where standard engines (Postgres, MySQL, Redis protocols) are used, portability is high via dump/restore or logical replication. Proprietary extensions or distributed SQL semantics may require more effort. Open standards and export tools mitigate lock-in.

14. Managed Service Limitations

Younger platform; some advanced Postgres admin features abstracted; free tier shared resources.

15. Maintenance & Backup Windows

Customer-configurable or provider-managed low-impact maintenance. Backup windows typically continuous or daily with minimal performance impact.
