

Elastic Cloud

Managed Elasticsearch, Observability & Security

Elastic N.V. Service Proposal

1. SLA, Uptime & High Availability

SLA: 99.95% - 99.99% depending on configuration and cloud provider.

Architecture: Multi-AZ deployments. Cross-cluster replication. Automatic shard allocation & recovery.

RPO/RTO: RPO depends on snapshot frequency; RTO minutes for cluster recovery.

Multi-region and clustering options available where noted.

2. Encryption, Security & Compliance

Encryption: Encryption at rest (provider + optional CMEK). TLS in transit. Field-level security.

Certifications: SOC 2, ISO 27001, PCI DSS, HIPAA, FedRAMP, CSA STAR, GDPR

IAM: Elasticsearch native RBAC + SAML/OIDC SSO. API keys. Private connectivity. IP filtering.

Audit logging and customer-managed keys supported on applicable tiers.

3. Performance Characteristics

Autoscaling. Hot/warm/cold/frozen tiers. Searchable snapshots. Machine learning nodes.

4. Scaling (Vertical / Horizontal / Auto)

Autoscaling policies. Horizontal node addition. Index lifecycle management for cost/performance.

5. Backup, Recovery & Disaster Recovery

Snapshot & restore to object storage. Automated SLM (Snapshot Lifecycle Management). Cross-cluster.

Replication and failover capabilities as described in HA section. Service credits available for SLA breaches per policy.

6. Pricing Model & Additional Fees

Resource-based (RAM hours primarily) + storage. Annual prepay discounts. Serverless option emerging.

Additional / Hidden Fees: Network egress, backup storage beyond included, snapshot storage, premium support, data transfer between regions/clouds, CMEK/KMS usage.

Reserved / Committed Discounts: Annual prepayment and enterprise agreements. Contact Elastic sales.

7. Observability, Monitoring & Slow Query Analysis

Built-in Stack Monitoring, APM, Logging, SIEM, anomaly detection, alerting.

Most platforms provide slow-query logs, explain plans, and recommendation engines.

8. Support Tiers & Response Times

Standard, Gold, Platinum, Enterprise. 24/7 for Platinum+. Response SLAs by severity.

9. Data Migration & Tooling

Snapshot restore, reindex from remote, Elastic Cloud Migration tools, partner services.

10. Network, VPC/Private Access & Peering

PrivateLink / PSC / Private Endpoint. VPC peering alternatives. Egress charges.

11. Data Center / Region Locations

AWS, GCP, Azure: extensive coverage incl. Mumbai, Singapore, Tokyo, Seoul, Frankfurt, Virginia, Oregon, London, Sydney.

12. Vendor Lock-in & Portability

Where standard engines (Postgres, MySQL, Redis protocols) are used, portability is high via dump/restore or logical replication. Proprietary extensions or distributed SQL semantics may require more effort. Open standards and export tools mitigate lock-in.

13. Managed Service Limitations

Search-oriented more than transactional OLTP; cost can grow with data volume and retention; learning curve for cluster management.

14. Maintenance & Backup Windows

Customer-configurable or provider-managed low-impact maintenance. Backup windows typically continuous or daily with minimal performance impact.

15. Supported Engines & Technology Stack

Elasticsearch, Kibana, Logstash/Beats integrations, Elastic Agent
Compatible with standard drivers, ORMs, and tooling for the listed engines.
