

Neo4j Aura

Fully Managed Graph Database Service

Neo4j, Inc. Service Proposal

1. SLA, Uptime & High Availability

SLA: 99.95% for Professional; higher for Enterprise.

Architecture: Causal clustering with automatic failover. Multi-AZ.

RPO/RTO: RPO near-zero with continuous backup; RTO minutes.

Multi-region and clustering options available where noted.

2. Encryption, Security & Compliance

Encryption: Encryption at rest and in transit. Customer-managed keys on Enterprise.

Certifications: SOC 2 Type II, ISO 27001, GDPR, HIPAA eligible on Enterprise

IAM: Aura console roles, database users/roles, SSO, PrivateLink / private endpoints, IP allowlists.

Audit logging and customer-managed keys supported on applicable tiers.

3. Performance Characteristics

Native graph storage & processing. Causal clustering. Graph Data Science library. Sub-second traversals on large graphs.

4. Scaling (Vertical / Horizontal / Auto)

Vertical scaling of instance size. Read replicas. AuraDB Professional to Enterprise upgrade path.

5. Backup, Recovery & Disaster Recovery

Automated continuous backups. On-demand snapshots. Point-in-time restore.

Replication and failover capabilities as described in HA section. Service credits available for SLA breaches per policy.

6. Pricing Model & Additional Fees

Hourly by instance size (memory primarily). Free tier (AuraDB Free). Annual commits discount.

Additional / Hidden Fees: Network egress, backup storage beyond included, snapshot storage, premium support, data transfer between regions/clouds, CMEK/KMS usage.

Reserved / Committed Discounts: Annual prepaid discounts. Enterprise custom pricing. Contact Neo4j sales.

7. Observability, Monitoring & Slow Query Analysis

Aura console metrics, query log, APOC monitoring, Prometheus, integration with observability tools.

Most platforms provide slow-query logs, explain plans, and recommendation engines.

8. Support Tiers & Response Times

Community, Standard, Premium. 24/7 for Premium.

9. Data Migration & Tooling

neo4j-admin dump/load, ETL tools, partner connectors, Cypher-based migration scripts.

10. Network, VPC/Private Access & Peering

Public + private endpoints. VPC peering equivalents. Egress fees.

11. Data Center / Region Locations

AWS, GCP, Azure regions: US, EU, Asia-Pacific (Tokyo, Singapore, Sydney).

12. Vendor Lock-in & Portability

Where standard engines (Postgres, MySQL, Redis protocols) are used, portability is high via dump/restore or logical replication. Proprietary extensions or distributed SQL semantics may require more effort. Open standards and export tools mitigate lock-in.

13. Managed Service Limitations

Graph model different from relational; Cypher learning; not ideal for pure tabular OLTP without graph value.

14. Maintenance & Backup Windows

Customer-configurable or provider-managed low-impact maintenance. Backup windows typically continuous or daily with minimal performance impact.

15. Supported Engines & Technology Stack

Neo4j Graph Database, AuraDB, AuraDS (Data Science)

Compatible with standard drivers, ORMs, and tooling for the listed engines.
