

SingleStore Helios

The Real-Time Distributed SQL Database

SingleStore Service Proposal

1. Encryption, Security & Compliance

Encryption: Encryption at rest and in transit. Customer-managed keys available.

Certifications: SOC 2 Type II, ISO 27001, PCI DSS, HIPAA, GDPR

IAM: RBAC, SSO/SAML, Private Link, IP allowlists, SCIM.

Audit logging and customer-managed keys supported on applicable tiers.

2. Performance Characteristics

Unified HTAP: rowstore + columnstore. Sub-second analytics on fresh data. High concurrency.

3. Scaling (Vertical / Horizontal / Auto)

Horizontal scale-out of leaves/aggregators. Elastic compute. Workspace scaling.

4. Backup, Recovery & Disaster Recovery

Continuous backup + PITR. Fast restore. Cross-AZ/region options.

Replication and failover capabilities as described in HA section. Service credits available for SLA breaches per policy.

5. Pricing Model & Additional Fees

Credit-based or resource-based. Annual commits for discounts. Free trial.

Additional / Hidden Fees: Network egress, backup storage beyond included, snapshot storage, premium support, data transfer between regions/clouds, CMEK/KMS usage.

Reserved / Committed Discounts: Annual and multi-year commits. Enterprise volume pricing available.

6. Observability, Monitoring & Slow Query Analysis

SingleStore Studio, monitoring dashboards, query history, Prometheus export, alerts.

Most platforms provide slow-query logs, explain plans, and recommendation engines.

7. Support Tiers & Response Times

Standard, Premium. 24/7 options. Severity SLAs.

8. Data Migration & Tooling

SingleStore Replicate, MySQL dump/load, AWS DMS, partner ETL.

9. Network, VPC/Private Access & Peering

Private connectivity. Public endpoints with controls. Egress fees.

10. Data Center / Region Locations

AWS, Azure, GCP: major regions including US, EU, Asia-Pacific.

11. Vendor Lock-in & Portability

Where standard engines (Postgres, MySQL, Redis protocols) are used, portability is high via dump/restore or logical replication.

Proprietary extensions or distributed SQL semantics may require more effort. Open standards and export tools mitigate lock-in.

12. Managed Service Limitations

Proprietary engine (MySQL compatible but not identical); HTAP model has specific best practices; smaller community than pure open-source.

13. Maintenance & Backup Windows

Customer-configurable or provider-managed low-impact maintenance. Backup windows typically continuous or daily with minimal performance impact.

14. Supported Engines & Technology Stack

SingleStore (MySQL wire-compatible, HTAP)

Compatible with standard drivers, ORMs, and tooling for the listed engines.

15. SLA, Uptime & High Availability

SLA: 99.99% availability.

Architecture: Multi-AZ with automatic failover. Redundancy across availability zones.

RPO/RTO: RPO near-zero; RTO low minutes.

Multi-region and clustering options available where noted.
