

DigitalOcean Managed Databases

Simple, Predictable Managed Databases for Developers & SMBs

DigitalOcean Service Proposal

1. Supported Engines & Technology Stack

PostgreSQL, MySQL, Redis, MongoDB, Kafka, OpenSearch
Compatible with standard drivers, ORMs, and tooling for the listed engines.

2. SLA, Uptime & High Availability

SLA: 99.95% for primary nodes; higher with standbys.
Architecture: Standby nodes in different AZs. Automatic failover. Read-only nodes.
RPO/RTO: RPO minutes (backup frequency); RTO minutes with standby.
Multi-region and clustering options available where noted.

3. Encryption, Security & Compliance

Encryption: Encryption at rest. TLS in transit. Limited CMEK (evolving).
Certifications: SOC 2 Type II, ISO 27001, PCI DSS (select), GDPR
IAM: DigitalOcean teams/roles, database users, trusted sources (IP), VPC, Cloud Firewalls.
Audit logging and customer-managed keys supported on applicable tiers.

4. Performance Characteristics

SSD-backed. Connection pooling (PgBouncer for Postgres). Read-only nodes. Predictable performance.

5. Scaling (Vertical / Horizontal / Auto)

Vertical resize online. Add read-only nodes. Storage can be increased. Limited horizontal for some.

6. Backup, Recovery & Disaster Recovery

Daily automated backups + PITR (Postgres/MySQL). Retention 7 days default, configurable.
Replication and failover capabilities as described in HA section. Service credits available for SLA breaches per policy.

7. Pricing Model & Additional Fees

Simple monthly: \$15+ for smallest. Predictable. No surprise egress in many cases within DO. Annual not heavily discounted but simple.

Additional / Hidden Fees: Network egress, backup storage beyond included, snapshot storage, premium support, data transfer between regions/clouds, CMEK/KMS usage.

Reserved / Committed Discounts: Simple pricing; volume via account managers for large customers. Startup credits often available.

8. Observability, Monitoring & Slow Query Analysis

Built-in graphs, metrics, logs, query insights for Postgres, alerts via monitoring.
Most platforms provide slow-query logs, explain plans, and recommendation engines.

9. Support Tiers & Response Times

Ticket + community. Higher support plans available. Response not as aggressive as hyperscalers.

10. Data Migration & Tooling

Native dump/restore, replication setup guides, partner tools.

11. Network, VPC/Private Access & Peering

VPC, private networking, trusted sources. Simple egress pricing.

12. Data Center / Region Locations

NYC, SFO, TOR, LON, FRA, AMS, BLR (Bangalore), SGP, SYD and more DigitalOcean regions.

13. Vendor Lock-in & Portability

Where standard engines (Postgres, MySQL, Redis protocols) are used, portability is high via dump/restore or logical replication. Proprietary extensions or distributed SQL semantics may require more effort. Open standards and export tools mitigate lock-in.

14. Managed Service Limitations

Fewer advanced enterprise features (limited CMEK historically, fewer regions than hyperscalers); best for mid-scale not massive global.

15. Maintenance & Backup Windows

Customer-configurable or provider-managed low-impact maintenance. Backup windows typically continuous or daily with minimal performance impact.
