

Timescale Cloud

PostgreSQL for Time-Series, Events and Analytics

Timescale Inc. Service Proposal

1. Scaling (Vertical / Horizontal / Auto)

Vertical compute. Storage independent. Read replicas. Multi-node for large scale (distributed hypertables).

2. Backup, Recovery & Disaster Recovery

Continuous backup + PITR. Forking for branching workflows. Retention policies.

Replication and failover capabilities as described in HA section. Service credits available for SLA breaches per policy.

3. Pricing Model & Additional Fees

Usage-based compute + storage. Free tier. Scale plans. Annual discounts.

Additional / Hidden Fees: Network egress, backup storage beyond included, snapshot storage, premium support, data transfer between regions/clouds, CMEK/KMS usage.

Reserved / Committed Discounts: Annual plans. Enterprise custom pricing. Contact Timescale sales.

4. Observability, Monitoring & Slow Query Analysis

Insights dashboard, query stats, compression stats, Prometheus, Grafana integrations, slow queries.

Most platforms provide slow-query logs, explain plans, and recommendation engines.

5. Support Tiers & Response Times

Community, Standard, Premium. Priority support tiers.

6. Data Migration & Tooling

pg_dump, logical replication, Timescale migration guides, AWS DMS compatible.

7. Network, VPC/Private Access & Peering

Public + private. Connection pooling. Egress standard AWS rates.

8. Data Center / Region Locations

AWS regions primarily: US East/West, EU (Ireland/Frankfurt), Asia (Singapore, Tokyo), and expanding.

9. Vendor Lock-in & Portability

Where standard engines (Postgres, MySQL, Redis protocols) are used, portability is high via dump/restore or logical replication.

Proprietary extensions or distributed SQL semantics may require more effort. Open standards and export tools mitigate lock-in.

10. Managed Service Limitations

Optimized for time-series; pure OLTP possible but not the primary strength; some distributed features still maturing.

11. Maintenance & Backup Windows

Customer-configurable or provider-managed low-impact maintenance. Backup windows typically continuous or daily with minimal performance impact.

12. Supported Engines & Technology Stack

TimescaleDB (PostgreSQL extension) + PostgreSQL
Compatible with standard drivers, ORMs, and tooling for the listed engines.

13. SLA, Uptime & High Availability

SLA: 99.9%+ ; higher with HA configurations.

Architecture: Multi-AZ HA with automatic failover. Read replicas.

RPO/RTO: RPO seconds; RTO minutes.

Multi-region and clustering options available where noted.

14. Encryption, Security & Compliance

Encryption: Encryption at rest and in transit. CMEK available on higher tiers.

Certifications: SOC 2 Type II, GDPR, ISO in progress / available

IAM: Project roles, database users, SSO on higher plans, IP allowlists, private networking.

Audit logging and customer-managed keys supported on applicable tiers.

15. Performance Characteristics

Hypertables, continuous aggregates, compression (10x+), columnar storage options. Excellent time-series ingest & query.
